MOLECULAR

Series IV Computer System

The basic BCL MOLECULAR Series IV comprises

A Central Processor of 32,000 bytes of core storage.

A Twin cartridge Disc Drive with a capacity of 10 million characters of directly accessible files.

A 1920 character screen Visual Display Unit with a full alpha-numeric keyboard and 10 key pad for entering and verifying data.

A 150 character per second serial printer for fast production of documents and reports.

The MOLECULAR Series IV is a disc based, direct entry accounting system. It is designed to work in a normal office environment and it can be operated by your existing clerical staff. A full multi-programming operating system, as well as all disc handling software is provided with the Series IV and is included in the basic price. This means that BCL software packages covering sales invoicing, stock control, sales ledger, purchase and nominal ledgers and payroll can run separately or concurrently with specifically developed software applications. The MOLECULAR Series IV is fully upgradable. Extra processor capacity and peripherals can be added as demanded by increased volumes as your business expands.
